

**NetworkIP is an international voice service provider with over 28 years of experience, specializing in high-quality international calling services. We help mobile operators outsource international calling with minimal risk and significant regulatory savings. Through exclusive connections with major MNOs such as AT&T, T-Mobile, and Verizon, we support direct dialing services that ensure seamless communication.**

**Our highly evolved platform offers a range of bundled and add-on international voice services, eliminating the barrier and confusion for consumers. With a long-standing reputation in the telecom industry, NetworkIP continues to innovate, supporting the global voice communication needs of our clients and subscribers worldwide.**

NetworkIP's international calling service offers three distinct products tailored for mobile subscribers. Each plan is designed to support different needs and usage patterns, ensuring all subscribers have the right option for staying connected globally without unexpected costs.

## Bundled Global Calling Plan

This plan is automatically included with the subscriber's (monthly) mobile service subscription at no additional charge to the subscriber. It includes unlimited minutes to many international destinations, with generous capped minutes for other international destinations. All subscribers provisioned on the same mobile plan offering, must be renewed monthly, regardless of utilization.

The mobile carrier pays NetworkIP a fixed cost per subscriber provisioned with the plan.

If additional minutes are needed for those capped minute destinations during a subscriber's monthly billing cycle, then the subscriber may purchase a **Top-Up ILD Wallet**.

## Add-On Global Calling Plan

Different from the Bundled plan, this plan is purchased by the subscriber separate from their mobile plan. It includes unlimited minutes to many international destinations, with generous capped minutes for other international destinations. The plan can be renewed monthly with the subscriber's mobile service.

The subscriber pays the mobile carrier a retail price, then NetworkIP bills the mobile carrier a discount off the retail price.

If additional minutes are needed for those limited minute destinations during a subscriber's monthly billing cycle, then the subscriber may also purchase a **Top-Up ILD Wallet**.

## **Bundled Unlimited Calling Plan**

This plan is automatically included with the subscriber's (monthly) mobile service subscription at no additional charge to the subscriber. It includes unlimited minutes to some international destinations (ex: Canada & Mexico), with no minutes for other international destinations. All subscribers provisioned on the same mobile plan offering, must be renewed monthly, regardless of utilization.

The mobile carrier pays NetworkIP a fixed cost per subscriber provisioned with the plan.

If additional minutes are needed, then the subscriber may purchase an Add-On Global Calling Plan &/or **Top-Up ILD Wallet**.

## **Add-On Unlimited Calling Plan**

Different from the Bundled plan, this plan is purchased by the subscriber separate from their mobile plan. It includes unlimited minutes to some international destinations (ex: Canada & Mexico), with no minutes for other international destinations. The plan can be renewed monthly with the subscriber's mobile service.

The subscriber pays the mobile carrier a retail price, then NetworkIP bills the mobile carrier a discount off the retail price.

If additional minutes are needed, then the subscriber may purchase an Add-On Global Calling Plan &/or **Top-Up ILD Wallet**.

## Top-Up ILD Wallet

This plan is used as a top-up to either the bundled or add-on Calling plans. The retail dollar amount is \$10 USD and delivers the same minutes per destination as the Global Calling plans for capped minute destinations and generous minutes to the rest of the world.

If a subscriber has available capped minutes in a Global Calling plan, the funds from their ILD Wallet are only decremented when the subscriber's included capped minutes have been exhausted. The funds in the ILD Wallet remain available for 180 days from either purchase or last use.

The subscriber pays the mobile carrier the retail price added to ILD Wallet, then NetworkIP bills the mobile carrier a discount off the retail price.
